

Are you “Back to School” ready?

TRP LED's (Light emitting diodes) are manufactured to the latest specifications by using our manufacturers expertise. The LED's produce light without the use of a filament, making them a brighter, more durable, energy-efficient alternative to incandescent lighting.

LED's are more visible than regular lights. Their brightness increases vehicle security and instantaneous illuminations means more reaction time for trailing vehicles. LED's are energy efficient. They use up to 85% less power, and that means more power for other vehicle applications.

■ Features & Benefits:

- ★ 100,000 hour life equals a decade of normal use
- ★ Virtually impervious to shock and vibration
- ★ Completely sealed for protection from the elements
- ★ Internal components are encapsulated in epoxy for resistance to moisture and corrosion.
- ★ All TRP exterior lamps utilize UV-resistant poly-carbonate lenses.
- ★ 10 year limited warranty
